

PROBLEM SOLVING ALGORITHMS

NAME - RAHUL POTHIRENDI

NUID - 002889957

GITHUB - <https://github.com/Pothirendirahul/INFO6205>

TASK -

In this assignment, your task is to determine--for sorting algorithms--what is the best predictor of total execution time: comparisons, swaps/copies, hits (array accesses), memory used, or some combination of these.

You will run the benchmarks for merge sort, (dual-pivot) quick sort, and heap sort. You will sort randomly generated arrays of between 10,000 and 256,000 elements (doubling the size each time). If you use the *SortBenchmark*, as I expect, the number of runs is chosen for you. So, you can ignore the instructions about setting the number of runs.

For each experiment (a sort method of a given size), you will run it twice: once for the instrumentation, once (without instrumentation) for the timing.

Of course, you will be using the *Benchmark* and/or *Timer* classes, as you did in a previous assignment.

You must support your (clearly stated) conclusions with evidence from the benchmarks (you should provide log/log charts and spreadsheets typically).

All of the code to count comparisons, swaps/copies, and hits, is already implemented in the *InstrumentedHelper* class. You can see examples of the usage of this kind of analysis in:

- `src/main/java/edu/neu/coe/info6205/util/SorterBenchmark.java`
- `src/test/java/edu/neu/coe/info6205/sort/linearithmic/MergeSortTest.java`
- `src/test/java/edu/neu/coe/info6205/sort/linearithmic/QuickSortDualPivotTest.java`
- `src/test/java/edu/neu/coe/info6205/sort/elementary/HeapSortTest.java` (you will have to refresh your repository for HeapSort).

- QuickSort Dual Pivot generally performs better than MergeSort and HeapSort in terms of normalized time and raw time across different numbers of elements.
- It consistently has lower normalized time and raw time values compared to the other two algorithms.
- HeapSort tends to have the highest normalized time and raw time values among the three algorithms, indicating it is generally slower compared to QuickSort Dual Pivot and MergeSort.
- MergeSort generally performs better than HeapSort but slightly worse than QuickSort Dual Pivot in terms of time complexity.
- QuickSort Dual Pivot uses no extra memory for copying elements (copies = 0), whereas MergeSort and HeapSort involve copying elements, especially as the number of elements increases.
- This indicates QuickSort Dual Pivot has better memory efficiency in terms of avoiding additional memory allocations.
- HeapSort and MergeSort involve swaps, which indicates more memory operations compared to QuickSort Dual Pivot, which has fewer or no swaps.
- Merge Sort typically conducts the most comparisons, followed by Quick Sort and Heap Sort in the majority of instances. However, the difference in the number of comparisons between Merge Sort and Quick Sort gets smaller as the dataset gets bigger.
- Heap Sort is the algorithm that requires the most swaps in terms of frequency of operations; Quick Sort comes in second, while Merge Sort requires the least. Furthermore, with bigger datasets, the differences in swap operations between Heap Sort and Quick Sort become more noticeable.

- Combine Sort uses a method known as hits or merges, which is the process of merging two subsets together during the merging step. The count directly increases with the amount of the dataset.

Unit Tests - Merge Sort

The screenshot shows an IDE with the `MergeSortTest.java` file open. The code defines a `testSort5()` method that uses a `HelperFactory` to create an `InsertionSort` helper and a `MergeSort` instance. It generates a random array of 10000 integers and sorts it using `MergeSort`. Below the code, the `Run` tab displays the test results for `MergeSortTest`.

```
public void testSort5() throws Exception {
    final int k = 7;
    ArrayList<Long> time = new ArrayList<>();
    final int N = (int) Math.pow(2, k);
    final Helper<Integer> helper1 = HelperFactory.create(
        description: "insertion sort", N, Config.set
    );
    System.out.println(helper1);
    final Integer[] xs = helper1.random(Integer.class, r -> r.nextInt(
        bound: 10000));
    System.nanoTime();
    GenericSort<Integer> s = new MergeSort<>(xs.length, config);
    for (int i = 0; i <= 1000; i++) {
        Long start = System.nanoTime();
        Integer[] ys = s.sort(xs);
    }
}
```

Run MergeSortTest

Tests passed: 15 of 15 tests - 556 ms

Test Name	Duration
testSort11_partialsortec	198 ms
testSort9_partialsorted	47 ms
testSort1	3 ms
testSort2	11 ms
testSort3	5 ms
testSort4	136 ms
testSort5	23 ms
testSort6	24 ms
testSort7	20 ms
testSort10_partialsorted	38 ms
testSort8_partialsorted	39 ms
testSort12	8 ms
testSort13	1 ms
testSort14	2 ms
testSort1a	0 ms

Summary of test results:

- Instrumenting helper for insertion sort with 128 elements
- partial sorted average time partialsorted_Cutoff + Insurance + NoCopy: 175785
- Instrumenting helper for insertion sort with 128 elements
- partial sorted average time partialsorted_Cutoff + NoCopy: 44799
- Instrumenting helper for merge sort with 128 elements
- StatPack {hits: 1,790, normalized=2.882; copies: 640, normalized=1.030; inversions: 4,224, normalized=6.801; swaps: 101, normalized=0.163; fixes: 4,224, normalized=6.801; compares: 751, normalized=1.209}
- Compares751
- Worst Compares769
- Instrumenting helper for insertion sort with 128 elements
- Instrumenting helper for merge sort with 128 elements
- StatPack {hits: 1,792, normalized=2.885; copies: 896, normalized=1.443; inversions: <unset>; swaps: 0, normalized=0.000; fixes: 0, normalized=0.000; compares: 448, normalized=0.721}
- Instrumenting helper for insertion sort with 128 elements
- average time random_Cutoff: 133942
- Instrumenting helper for insertion sort with 128 elements
- average time random_Cutoff + NoCopy: 21346

Heap Sort

The screenshot shows an IDE with the `HeapSortTest.java` file open. The code includes package declarations, imports, and a `testMutatingHeapSort` method. Below the code, the `Run` tab displays the test results for `HeapSortTest`.

```
package edu.neu.coe.info6205.sort.elementary;

import edu.neu.coe.info6205.sort.*;
import edu.neu.coe.info6205.util.Config;
import edu.neu.coe.info6205.util.LazyLogger;
import edu.neu.coe.info6205.util.PrivateMethodTester;
import edu.neu.coe.info6205.util.StatPack;
import org.junit.Test;
```

Run HeapSortTest

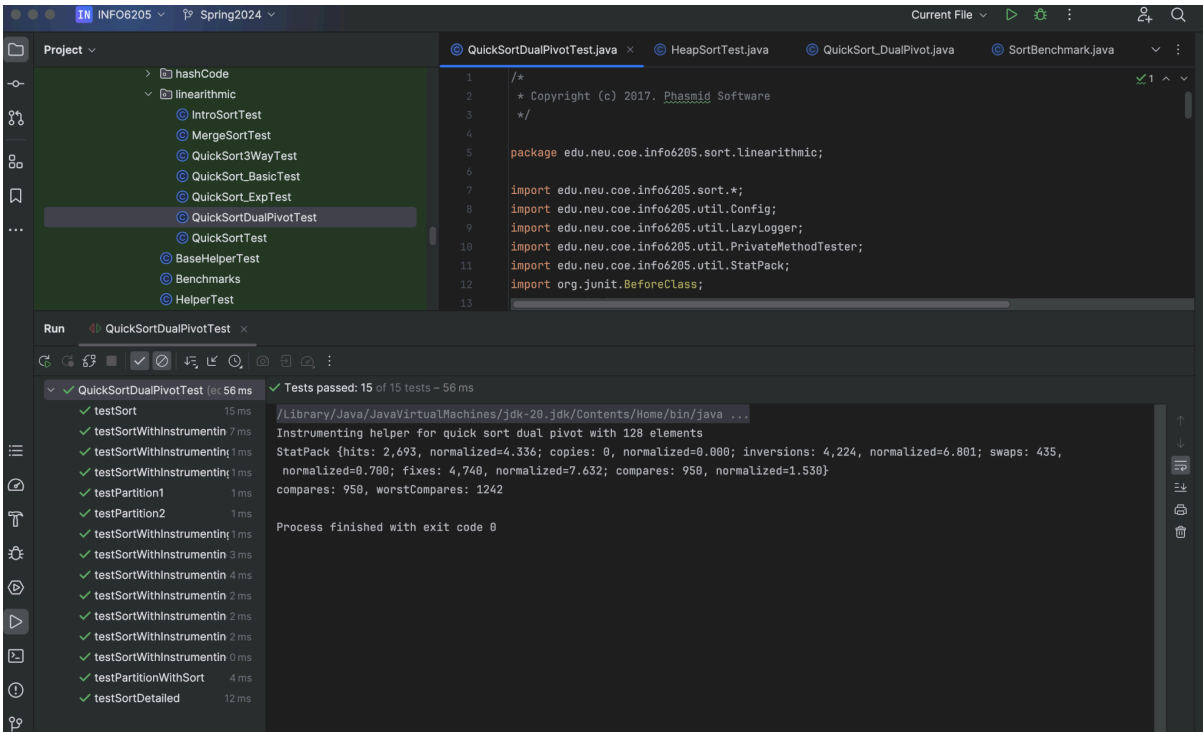

Tests passed: 5 of 5 tests - 257 ms

Test Name	Duration
testMutatingHeapSort	222 ms
sort0	17 ms
sort1	11 ms
sort2	5 ms
sort3	2 ms

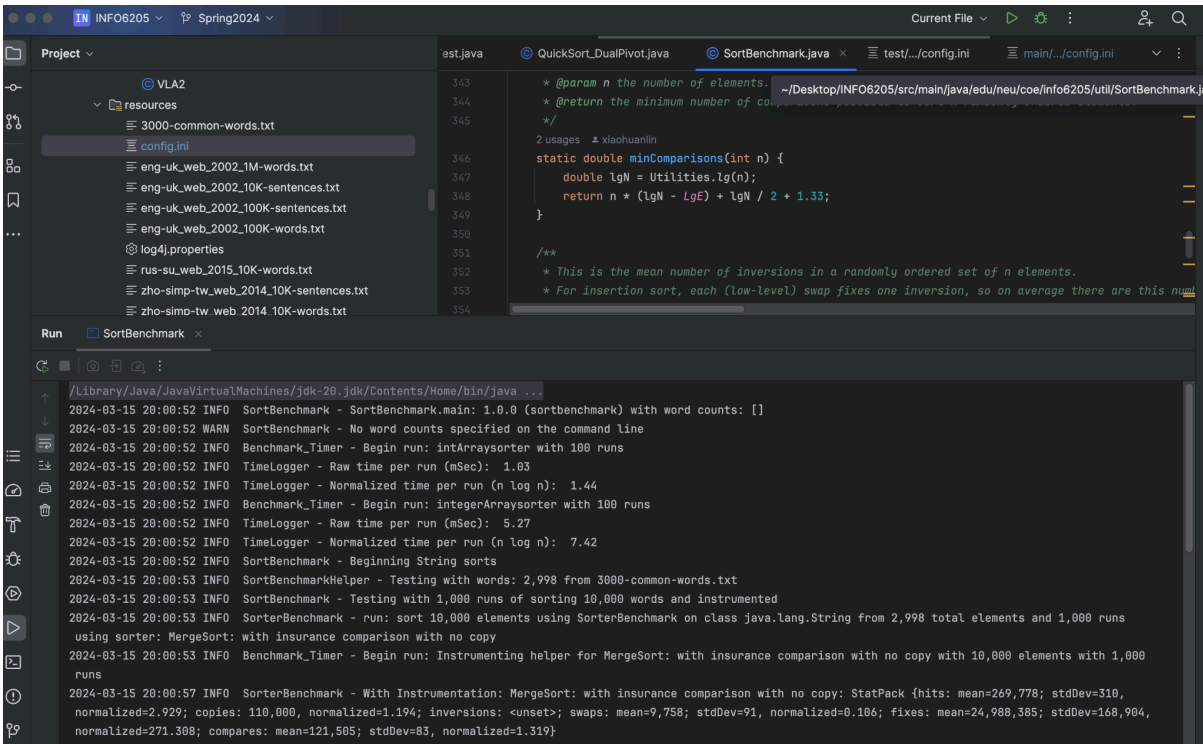

Summary of test results:

- Helper for HeapSort with 4 elements
- Process finished with exit code 0

Quick Sort Dual Pivot

SortBenchmark
